PROFESSIONAL SUMMARY

Final-year B.Tech Computer Science student with strong expertise in Full Stack MERN development and Generative AI. Hands-on experience building AI-powered agents, RAG-based systems, agentic AI applications, and Model Context Protocol (MCP)-integrated tools. Proficient in JavaScript, Python, and Java. Proven ability to deliver scalable MVPs using Gemini API and LLM integrations. Actively developing AI AgentForce-style applications for real-world business automation. IEEE-accepted researcher in Cognitive Architecture for mental health AI.

RESEARCH & PUBLICATION

AGI Therapist: Cognitive Architecture for Integrating Affective, Dual-Memory through Voice-Based Perception

[IEEE International Conference CE2CT-2026](#) | IEEE Record #68422 | Paper ID: 208 | Accepted: March 2026

- Co-authored peer-reviewed research on a modular cognitive architecture for autonomous therapeutic interaction.
- Architecture incorporates Affective Perception, Dual-Memory Retrieval-Augmented Generation (RAG), and Executive Reasoning modules.
- Research published as part of the Building Blocks of AGI project (PCS25-119) at Integral University, Lucknow.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science and Engineering

Integral University, Lucknow (in association with IBM) | 2022 – 2026 | CGPA: 9.8 / 10 (8th Semester)

[View Marksheet](#) | [IBM Certified – Cloud Computing & AI](#)

Senior Secondary (12th) – Science (PCM)

Sumitra Modern School, Lucknow | CBSE Board | Percentage: 91%

[View Marksheet](#)

Secondary (10th)

Sumitra Modern School, Lucknow | CBSE Board | Percentage: 85%

[View Marksheet](#)

EXPERIENCE

Software Engineering Intern – Machine Learning & Generative AI

Sipher Web Pvt. Ltd. | May 2025 – July 2025 | [Internship Certificate](#)

- Built end-to-end ML solutions covering the full lifecycle: data preprocessing, model training, and evaluation using Python libraries.
- Developed a spam detection prototype using Generative AI (GPT-based APIs) with bag-of-words keyword filtering.
- Gained practical experience integrating LLM APIs into production-grade web applications.

PROJECTS

AGI Therapist – Artificial Cognitive Architecture (Collaborative Project) [Live](#)

- Multi-modular Cognitive Architecture designed for autonomous therapeutic interaction using distinct Perception, Memory, and Reasoning modules.
- Unlike LLM wrappers, uses Affective Computing, Dual-Memory RAG, and Chain-of-Thought Executive Control for clinically safe responses.
- Research accepted at IEEE CE2CT-2026 (Paper ID 208, IEEE Record #68422).

FixFlow AI – Agentic AI-Powered Workflow Automation Platform [GitHub](#) | [Live](#)

- Built an agentic AI application leveraging autonomous task planning and tool-calling to streamline workflow automation.
- Designed for real-world business process automation, integrating LLM-driven decision-making with structured execution pipelines.
- Deployed as a live, accessible MVP demonstrating end-to-end agentic AI capability.

AI Team Task Manager – Collaborative Team Task Management Platform [GitHub](#) | [Live](#)

- Full-stack MERN application for real-time collaborative task management with role-based access control, task assignment, priority tagging, and deadline tracking across teams.

- Built RESTful APIs with Node.js and Express.js, integrated MongoDB for persistent data storage, and deployed a live MVP accessible to real users.

SchoolMind AI – AI-Powered Student Performance & Management Platform [GitHub](#) | [Live](#)

- Ingests student performance data and pedagogy insights from teachers' assessments to build a comprehensive academic profile for each student.
- Features an inbuilt AI agent that generates an instant snapshot of a student's performance journey from the day they joined the school or institute.
- Reduces manual student management and personality-snapshot fetching time by 90%, drastically cutting administrative overhead for educators.
- Full-stack MERN application with AI-driven analytics, enabling data-informed decisions at scale.

Call Audit App – AI-Powered Call Intelligence System [GitHub](#) | [Live](#)

- Full-stack MERN CRM that automatically scores leads using AI, suggests next actions, and provides a sales pipeline dashboard.
- Integrated Generative AI for intelligent lead prioritization and real-time recommendations.

Code Review App – AI-Powered MERN Application [GitHub](#) | [Live](#)

- Full-stack MERN application that accepts user code and returns AI-generated analysis: description, robustness assessment, and bug detection.
- Integrated Gemini API as the AI reasoning engine for real-time code evaluation.

Leads Data CRM – AI-Enhanced CRM Platform [GitHub](#) | [Live](#)

- Developed an AI platform that analyzes call transcripts for quality, compliance, and agent performance using Gemini API reasoning.
- Automates call audit workflows, reducing manual review time significantly.

TECHNICAL SKILLS

Languages: JavaScript, Python, Java, C (Data Structures & Algorithms)

Frontend: HTML, CSS, Tailwind CSS, React.js

Backend: Node.js, Express.js

Databases: MongoDB, MySQL, Firebase

AI / ML: Generative AI, Agentic AI, Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG), Prompt Engineering, LLM API Integration, Cognitive Architecture, Affective Computing, AI Agent Orchestration | [IBM Certified – Cloud Computing & AI](#)

Tools: Git, GitHub, Postman, VS Code, Google Colab, GitHub Copilot, Google Agentspace, Claude
