PROFESSIONAL SUMMARY

Final-year B.Tech Computer Science student (CGPA 9.8/10) with hands-on product experience defining, prioritizing, and shipping AI-powered and PWA-based MVPs end-to-end. Skilled at translating user problems into product requirements, scoping features using prioritization frameworks, and partnering with engineering to deliver measurable outcomes, including a 90% reduction in manual reporting time for one platform and multiple live, installable Progressive Web Apps for real-world businesses.

IEEE-accepted researcher (CE2CT-2026) on cognitive-architecture-based AI systems. Strong technical fluency in Generative AI, full-stack MERN development, Progressive Web App (PWA) development, and cloud platforms gives an edge in scoping technically complex products and working closely with engineering teams.

CORE PRODUCT COMPETENCIES

Product Strategy & Roadmapping • PRDs • User Research • Prioritization (RICE, MoSCoW) • MVP Scoping & 0-to-1 Delivery • Agile / Scrum • OKRs & KPIs • Cross-functional Collaboration • A/B Testing • Stakeholder Communication • Progressive Web App (PWA) Strategy • WordPress Development • Website Administration

RESEARCH & PUBLICATION

AGI Therapist: Cognitive Architecture for Integrating Affective, Dual-Memory Systems Through Voice-Based Perception

IEEE International Conference CE2CT-2026, Paper ID 208, Accepted March 2026 | [View Research Paper](#)

- Co-authored peer-reviewed research defining a modular product architecture (Affective Perception, Dual-Memory RAG, Executive Reasoning), validating product-market fit for clinically-safe AI support within the academic research community.

EXPERIENCE

Software Engineer — AI Agents Testing & Backend Development (Contract) — Turing

Aug 2026 – Present

- Review and refine LLM-generated problem statements for clarity and rigor, ensuring adherence to strict Codeforces-style standards, including LaTeX formatting and deterministic outputs.
- Validate the correctness of brute-force and optimal algorithmic solutions, ensuring code is efficient, readable, and adheres to language-specific style guides.
- Develop and review multi-step Chain-of-Thought (CoT) reasoning chains exploring naive-to-optimal approaches, articulating the rationale behind data structure and algorithm choices.
- Generate automated test suites (30+ cases per task) and validate solutions in Docker-based testing environments, alongside plagiarism checks against platforms such as AtCoder and CodeChef.
- Build Python backend applications that replicate existing SaaS tools (Slack, Linear, Jira, Notion, Gmail, wikis) as part of Turing's Connectors / ComputerBench initiative, implementing integrations and full-service backend functionality.

Software Engineering Intern — Machine Learning & Generative AI — Sipher Web Pvt. Ltd.

May 2025 – July 2025 | [Internship Certificate](#)

- Scoped and delivered an end-to-end ML prototype (spam detection) by defining requirements, evaluation criteria, and success metrics across data preprocessing, model training, and testing.
- Evaluated GPT-based Generative AI APIs against a bag-of-words baseline to inform a build-vs-approach trade-off decision balancing accuracy and cost.
- Partnered with engineering to integrate LLM APIs into production web applications, translating technical constraints into practical feature decisions.

PROJECTS — PRODUCT CASE STUDIES

FixFlow AI — Agentic AI Workflow Automation Platform — [GitHub](#) | [Live](#)

- Solved fragmented, manual workflow execution by defining the product vision for an agentic AI platform enabling autonomous task planning and tool-calling, scoping the MVP around core task-execution and deprioritizing secondary features to ship faster.
- Achieved a live, publicly accessible MVP demonstrating end-to-end agentic AI capability, validating feasibility for business workflow automation.

SchoolMind AI — AI-Powered Student Performance & Management Platform — [GitHub](#) | [Live](#)

- Solved inefficient, manual student-performance tracking by defining a product to auto-generate performance snapshots directly from teacher assessment data.
- Achieved a 90% reduction in reporting time — the platform's core success metric — by directing a full-stack MERN build with AI-driven analytics that enabled data-informed decisions at scale.

AI Team Task Manager — Collaborative Task Management Platform — [GitHub](#) | [Live](#)

- Solved team coordination gaps by defining requirements for role-based access, task assignment, priority tagging, and deadline tracking.

- Achieved a validated live MVP, adopted by real users, by directing a full-stack build (Node.js, Express, MongoDB) that improved task visibility and accountability.

AGI Therapist — Artificial Cognitive Architecture — [Live](#)

- Solved the lack of accessible, clinically-safe AI mental health support by identifying the gap and defining requirements for a multi-module cognitive architecture (Perception, Memory, Reasoning), prioritizing reliability over generic LLM responses.
- Achieved a validated architecture that later formed the basis of an IEEE-accepted research publication (CE2CT-2026).

Call Audit App — AI-Powered Call Intelligence System — [GitHub](#) | [Live](#)

- Solved slow, manual call-quality and compliance review by defining a product to replace it with automated transcript analysis powered by Gemini API reasoning.
- Achieved a significant cut in review time, enabling faster and more consistent compliance auditing.

Code Review App — AI-Powered MERN Application — [GitHub](#) | [Live](#)

- Solved the need for instant, AI-assisted code review by identifying the user pain point and scoping a product delivering code description, robustness assessment, and bug detection via the Gemini API.
- Achieved faster developer feedback loops, reducing manual code-review effort.

Leads Data CRM — AI-Enhanced CRM Platform — [GitHub](#) | [Live](#)

- Solved sales-prioritization inefficiency by defining a product using AI-driven lead scoring and a pipeline dashboard.
- Achieved reduced manual triage effort for sales teams, improving focus on high-value leads.

PROJECTS — PWA (PROGRESSIVE WEB APP) DEVELOPMENT

Wings River Café — Riverside Restaurant & Water Sports PWA — [Live](#)

- Solved fragmented online presence for a riverside multicuisine restaurant by designing and shipping an installable, mobile-first Progressive Web App with an interactive menu booklet, photo gallery, blog, and admin CMS.
- Achieved full PWA capability (installable manifest, app-like navigation) integrating online table/party booking, a WhatsApp inquiry flow, and a water-sports ride-token reservation system.

Chihiro Bakehouse & Coffee — Café Brand & Ordering PWA — [Live](#)

- Solved the need for a premium digital storefront for a boutique bakehouse by building a minimal, installable PWA showcasing artisanal offerings, location, and brand story.
- Achieved a fast, mobile-optimized experience with app-like install support, improving discoverability for the Cantonment, Lucknow café.

Janta Dhaba — Highway Restaurant Discovery PWA — [Live](#)

- Solved limited digital visibility for a 24/7 highway dhaba by delivering an installable PWA presenting menu, location, and amenities for highway travelers.
- Achieved improved customer reach and mobile engagement for a legacy highway food destination (est. 1970) through app-like performance and an offline-friendly, responsive design.

TECHNICAL FLUENCY

Languages: JavaScript, Python, Java, SQL, C (Data Structures & Algorithms)

Full-Stack: React.js, Node.js, Express.js, MongoDB, MySQL, Firebase, REST APIs, HTML, CSS, Tailwind CSS

PWA Development: Web App Manifest, Service Workers, Offline Caching Strategies, App-Shell Architecture, Push Notifications, Installable / App-like Web Experiences, Mobile-First & Responsive Design, Lighthouse PWA Auditing

AI / ML: Generative AI, Agentic AI, RAG, Prompt Engineering, LLM API Integration, Model Context Protocol (MCP), Cognitive Architecture, Affective Computing — IBM Certified: Cloud Computing & AI ([View Certificate](#))

Web Platforms: WordPress Development, Website Administration & Maintenance

Tools: Git, GitHub, Postman, VS Code, Google Colab, GitHub Copilot, Google Agentspace, Claude

EDUCATION

B.Tech — Computer Science and Engineering | CGPA: 9.8/10 | Integral University, Lucknow (with IBM) | 2022 – 2026 [View Marksheet](#)

Senior Secondary (12th, PCM): 91% [View Marksheet](#)

Secondary (10th): 85% [View Marksheet](#)

Sumitra Modern School (CBSE)
